

NOVITEX PODTRACKER

Multi-tool application increasing productivity and accountability.

One of our technology solutions that supports and strengthens our on-site services, like mailroom and conference room management, is our multi-tool application PodTracker. This automation product helps our on-the-ground employees streamline many of the services we perform for you.

Our employees receive a customized iPad® that enables them to track their workflows, while authorized personnel is given access to a secure, encrypted website that provides real-time access to data collected through the PodTracker. Access to this data allows our management team, as well as you and your team, detailed insights into our provided services.

This singular application is unique to Novitex and encompasses a range of tools that will help deliver services faster and smarter through:

- **Room Sweeps:** Enables the management of services needed for any designated office space, from conference rooms to workstations. It can provide customized checklists of daily information of the condition of equipment and office spaces to help ensure optimal efficiency.
- **Package Tracker:** Offers a complete chain of custody for all packages. Our employees can track the collection of data from pickup to delivery without manually logging data. This function helps decrease the probability of missing packages and enables quicker and easier communication at all stages of shipment and delivery. Data also is posted to the secure website for easy access.
- **Service Call Tracker:** Allows businesses to easily collect data from service calls. By digitally tracking service calls, management has the ability to quickly see when devices were serviced.

BENEFITS

The PodTracker provides our clients with the ability to:

- Eliminate outdated paper logs and consolidate checklists
- Incorporate a faster and more efficient management system
- Gain insight and visibility into workflows
- Leverage real-time data to make better business decisions
- Access to software that is 50 percent less expensive than most package tracking solutions
