INTELLIGENT LOCKERS

Managing office environments in the corporate world is more complicated than ever.

With the exponential growth of the mobile workforce and transformation of the traditional office space, organizations are looking for flexible, cost effective solutions to address their growing shared desk and employee storage needs. Additionally, as a result of this workforce transition, the number of package deliveries to corporate offices is on the uptick. But as an organization, how can you make sure each item still gets delivered to the correct end recipient both securely and on time?

With Novitex's Intelligent Lockers, you gain access a storage solution that can address these specific challenges while increasing your efficiency and improving processes. Our Intelligent Locker Systems are a simple, secure and easy-to-use automated package delivery, storage and retrieval system that help to simplify your internal package management workflows while still ensuring high levels of end-user convenience.

HOW IT WORKS

Legacy package delivery processes consider leaving a package on a desk to be a successful delivery. But, with employees more readily working from home or remote locations, these outdated methods are no longer acceptable in terms of convenience or security.

Did you know an average corporate mailroom can receive anywhere from 100 to 1,000 accountable deliveries each day? A typical mail/package delivery process includes a mail manager or administrator dropping off packages to end recipients and logging each piece, by-hand, in order to document the full chain-of-custody. This manual process is not only error prone but it also becomes cumbersome as the quantity of deliveries increase. Intelligent Lockers help to streamline this workflow for simplified package receipt, storage and delivery.

Step1

Step 2

RETRIEVE YOUR PACKAGES IN 4 SIMPLE STEPS

1. An employee orders a package to be delivered to their location.
2. The package is delivered, placed inside the Intelligent Locker, and through a built in touch screen, a delivery alert is queued.
3. The employee receives the alert with a pin via a text or email that their package has arrived.
4. Packages can then be accessed once the employee enters their pin and opens the locker.

Step 3

Step 4

BENEFITS OF INCORPORATING INTELLIGENT LOCKERS

In addition to enabling your organization to streamline and improve on your package distribution process, Intelligent Lockers provide a myriad of other benefits:

- 24|7|365 accessibility for secure and convenient package receipt
- Eliminates the need for a receiving room or reception area clutter
- High tech options such as RFID, QR Code access, etc.
- Provides end-to-end chain of custody and automation of the delivery process

- Customizable workflows to meet specific organizational needs
- State-of-the-art, proprietary digital locking technology for increased security
- Locker banks can run as standalone kiosks or network modules in variable sizes for customizable configuration(s)
